

## WELL WOMAN CONSENT

Your well woman exam is a preventative visit that includes your annual pap smear and refills of any current medications. Your history including medical, social, surgical and pharmaceutical will also be reviewed.

If you have any current problems or any problems are found on this exam, those will need to be documented by your provider and appropriate lab and radiology testing may need to be ordered. These problems or diagnosis will then need to be given to your insurance company to support the testing and documentation in your medical file.

I am aware that if I discuss any problems with my provider that these will need to be documented in my chart and maybe used for billing purposes. I understand that this may not be a covered benefit on my "well woman" exam, and that I may be responsible for any additional charges.
